

MAGIC

- * **MAGIC** is a fully water-soluble formulation in powder form useful for all types of nurseries (vegetable, ornamental, sugarcane, plantation, forestry, tissue culture)
- * **MAGIC** is used to treat uneven growth, stunted growth, curled leaves & chlorosis (yellowing of leaves) in pro-tray seedlings / potted plants in nurseries caused by certain unsuitable inputs such as cocopeat, soil, feed water, agro-chemicals etc. **MAGIC** acts very quickly, giving relief within days

- **MAGIC USAGE METHOD:**

- * For seedlings in pro-trays : Dissolve 1.5 to 2.0 g of **MAGIC** per litre of water and give deep spray or drench to affected seedlings. Application can be done in a single shot or in 2-3 instalments, keeping the total dosage of **MAGIC** at 1.5 to 2.0 g per tray. 1.5 kg **MAGIC** covers about 1,00,000 seedlings per application
- * For nursery plants in pots : Dissolve 1.5 to 2.0 g of **MAGIC** per litre of water and give deep spray or drench to affected plants. It can also be given through the drip line. Application can be done in a single shot or in 2-3 instalments, keeping the total dosage of **MAGIC** at 1.5 to 2.0 g per pot per application

- **MAGIC COMMERCIAL INFORMATION:**

- * Standard packing : 1 kg packets & 15 kg bags
- * **MAGIC** treatment cost for pro-tray seedlings: **About two paise per seedling**
- * **BEST BEFORE:** 24 months from the Mfg. date when stored unopened in a cool and dry place
